

Add the following new claims 25-62 as follows:

25. A portable information communication device for communicating with a remotely located telephone, comprising: a digital camera and a cellular telephone electrically connected and mounted in a housing with a battery means in the housing for supplying electrical power to said digital camera and said cellular telephone; means for activating said digital camera for capturing images in view of said housing; and means for activating said cellular telephone for wirelessly communicating with the remotely located telephone by dialing the number of the remotely located telephone and, when said cellular telephone and the remotely located telephone are telephonically connected, then transmitting said images from said digital camera to the remotely located telephone.

26. The device of claim 25, further comprising a digital memory for storing said images captured by said digital camera.

27. The device of claim 26, further comprising means for selectively causing said stored images to be transmitted by said cellular telephone to said remotely located telephone.

28. The device of claim 25, further comprising means in said housing for receiving sounds, and said cellular telephone also wirelessly communicating said sounds to said remotely located telephone.

29. The device of claim 28, further comprising a digital memory for storing said sounds.

30. The device of claim 29, further comprising means for selectively causing said stored sounds to be transmitted by said cellular telephone to said remotely located telephone.

31. The device of claim 28, wherein said cellular telephone simultaneously transmits said images and said sounds.

32. The device of claim 25, further including sensor means mounted in said housing for detecting a sound or movement near said housing, said means for activating said digital camera being in communication with and responsive to said sensor means for automatically activating said digital camera upon the occurrence of the detected sound or movement.

33. The device of claim 32, further comprising means in said housing for receiving sounds and being activated when said sensor means detects a sound or motion, and said cellular telephone also wirelessly communicating said sounds to said remotely located telephone when said sensor means detects said sound or movement.

34. The device of claim 32, further comprising a switch on said housing for selectively arming said sensor means.

35. The device of claim 25, further comprising an AM/FM radio means mounted in said housing and having controls for selective operation.

36. The device of claim 25, further comprising a microphone and ear piece connected by wire means to said cellular telephone for remotely using said cellular telephone.

37. The device of claim 26, further comprising a jack connection for directly connecting said digital memory to a computer for downloading said stored images from said digital memory.

38. The device of claim 25, further comprising an audio recorder mounted in said housing and having means for selectively recording audible transmissions to and from said cellular telephone.

39. The device of claim 25, further comprising an audio recorder mounted in said housing and having means for selectively recording sounds within a range of said housing.

40. The device of claim 25, further comprising a switch means for manually activating said digital camera without activating said cellular telephone.

41. The device of claim 25, further comprising a switch means for manually activating said digital camera and said cellular telephone for both capturing and transmitting said images.

42. The device of claim 41, wherein activating said means also activates an audible alarm mounted in said housing.

43. The device of claim 25, further comprising means for activating an audible alarm mounted in said housing.

44. A portable information communication device for communicating with a remotely located telephone, comprising: a digital camera, a microphone and a cellular telephone electrically connected and mounted in a housing with a battery means in the housing for supplying electrical power to said digital camera, said microphone and said cellular telephone; means for activating said digital camera and microphone for capturing images and sounds within a range of said housing; sensor means mounted in said housing for detecting a sound or movement within a predetermined range of and means for automatically activating said cellular telephone when said sensor means detects a sound or movement for wirelessly communicating with the remotely located telephone by dialing the number of the remotely located telephone and, when said cellular telephone and the remotely located telephone are telephonically connected, then transmitting said images and sounds from said digital camera and microphone to the remotely located telephone.

45. The device of claim 44, further comprising a digital memory means for storing said images captured by said digital camera and sounds captured by said microphone.

46. The device of claim 45, further comprising means for selectively causing said stored images and sounds to be transmitted by said cellular telephone to said remotely located telephone.

3.  
47. The device of claim ~~45~~<sup>2</sup>, further comprising a jack connection for directly connecting said ~~digital~~ memory means to a computer for downloading said stored images and sounds from said digital memory means.

48. The device of claim 44, further comprising a switch on said housing for selectively arming said sensor means.

4.  
~~49~~. The device of claim ~~44~~<sup>2</sup>, further comprising an AM/FM radio means mounted in said housing and having controls for selective operation.

5.  
~~50~~. The device of claim ~~44~~<sup>2</sup>, further comprising a remote microphone and ear piece connected by wire means to said cellular telephone for remotely using said cellular telephone.

51. The device of claim 44, further comprising an audio recording means mounted in said housing and having means for selectively recording audible transmissions to and from said cellular telephone.

6.  
~~52~~. The device of claim ~~44~~<sup>2</sup>, further comprising an alarm means mounted in said housing and being activated to produce an alarm when said sensor means detects a sound or movement.

7.  
~~53~~. The device of claim ~~44~~<sup>2</sup>, wherein said battery means comprises a single battery.

54. A portable information communication device for communicating with a remotely located telephone, comprising: a digital camera, a microphone and a cellular telephone electrically connected and mounted in a housing with a single battery mounted in said housing for supplying electrical power to said digital camera, said microphone and said cellular telephone sensor means mounted in said housing for detecting a sound or movement within a predetermined range of said housing; means for activating said digital camera for capturing images and sounds within a range of said housing; means for automatically activating said cellular telephone when said sensor means

EX 5  
detects a sound or movement for wirelessly communicating with the remotely located telephone by dialing the number of the remotely located telephone and, when said cellular telephone and the remotely located telephone are telephonically connected, then transmitting said images and sounds from said digital camera to the remotely located telephone; a digital memory means for storing said images captured by said digital camera and sounds captured by said microphone; means for selectively causing said stored images and sounds to be transmitted by said cellular telephone to said remotely located telephone; an AM/FM radio means mounted in said housing and having controls for selective operation of said AM/FM radio means; and a jack connection for directly connecting said digital camera to a computer for downloading said recorded images and sounds from said digital memory means.

55. The device of claim 54, further comprising an audio recorder mounted in said housing and having means for selectively recording audible transmissions to and from said cellular telephone.

56. The device of claim 54, further comprising an audio recorder mounted in said housing and having means for selectively recording sounds within a range of said housing.

57. The device of claim 54, further comprising a switch means for manually activating said digital camera without activating said cellular telephone.

58. The device of claim 54, further comprising a switch means for manually activating said digital camera and said cellular telephone for both capturing and transmitting said images.

59. The device of claim 58, wherein activating said means also activates an audible alarm mounted in said housing.
